

Business Analytics Internship

A cross-platform analytical review synthesizing Excel multi-dimensional modeling, SQL transactional queries, and Power BI profitability diagnostics.

 Excel Dashboard

 SQL Relational Engine

 Power BI BI Suite

Candidate Name Alapati Rohit Manikanta

Internship Track Business Analytics

Delivery Mode & Duration Virtual Mode (4 Weeks)

Task 1: Multi-Dimensional Sales Dashboard (Excel)

Premium Sales & Growth Trajectory

Total premium category sales reached **₹34,187,699.00** with a substantial **+98.9% Q2 vs Q1 growth** rate, led primarily by high customer demand in premium Apple products.

Samsung & Apple Brand Dominance

Samsung led unit revenue volume (₹9.59M), closely followed by OnePlus (₹7.20M), Apple (₹7.21M), and Xiaomi (₹6.60M), while Vivo trailed at ₹3.56M.

Metro Filtering & Temporal Volatility

Integrated slicers (Bangalore, Chennai, Delhi, Hyderabad, Mumbai) isolate city-specific trajectories, showing a May dip before rebounding aggressively into June (₹370k+).

Task 2: Transactional & Regional Data Mining (SQL)

Category & High-Value Revenue

Electronics captured top categorical volume (₹21,497.00 across 4 orders), while Home & Kitchen generated the single largest ticket order (₹9,999.00).

Payment Channel Preferences

UPI dominated volume (5 out of 10 transactions totaling ₹22,296.00), while Credit Cards generated the highest Average Order Value (AOV) at ₹6,099.00.

Order Fulfillment & Regional Hubs

90% delivery rate with only a 10% cancellation rate. Top customer spending is concentrated in Maharashtra (Priya Patel: ₹12,198) and Karnataka (Aarav Sharma: ₹10,898).

The screenshot displays a SQL query results window with the following tables:

customer_id	customer_name	city	total_spent_inr
2	Priya Patel	Mumbai	12198.00
1	Aarav Sharma	Bengaluru	10898.00
3	Rohan Verma	Delhi	8898.00
4	Sneha Reddy	Hyderabad	7499.00
5	Vikram Singh	Jaipur	3899.00

category	total_orders	total_revenue_inr
Electronics	4	21497.00
Home & Kitchen	1	9999.00
Apparel	2	6098.00
Books	2	5798.00

payment_method	total_transactions	avg_order_value_inr
Credit Card	2	6099.000000
Net Banking	1	4999.000000
UPI	5	4458.200000
Cash on Delivery	1	3899.000000

state	orders_count	state_revenue_inr
Maharashtra	2	12198.00
Karnataka	3	10898.00
Delhi	2	8898.00
Telangana	1	7499.00
Rajasthan	1	3899.00

customer_id	customer_name	delivered_orders	total_spent_inr

Query executed successfully. | localhost:SQLEXPRESS (10.50... OMSRISAIRAMOMTR\deli (51) master 00:00:00 Row: 1, Col: 1 33 rows

Task 3: Superstore Profitability & Discount Strategy (Power BI)

⚠ Zero Margin & Net Loss Deficit

Despite generating **\$15K in gross sales**, net profit slipped to **-\$5** (0.00% profit margin), driven directly by an excessive cumulative discount sum of **3.95**.

High-Discount Category Destruction

Binders (avg discount ~0.65), Tables (~0.47), and Machines (~0.35) produced severe negative profit margins, while low-discount Accessories & Phones maintained solid positive margins.

📍 Central Consumer Segment Distress

The Central region Consumer segment suffered the steepest profit deficit (-\$500+), while East and West Corporate/Consumer segments offset severe overall enterprise bankruptcy.

Cross-Functional Performance Matrix

Excel Sales Velocity

High top-line demand across metro hubs with substantial premium brand expansion. Strong volume growth in Q2 highlights expanding market appetite.

✓ **+98.9% Q2 vs Q1 Growth**

SQL Operational Health

Digital payment dominance via UPI paired with high-ticket Credit Card baskets. Solid fulfillment stability with 90% successful order completion.

✓ **90% Delivery Success**

Power BI Margin Risk

Disproportionate discounting directly erodes gross revenue. Heavy discounts in Binders, Tables, and Central region Consumer sales convert revenue into net losses.

⚠ **Net Profit: -\$5 / Margin: 0%**

🎯 Actionable Management Recommendations

P1: Growth

1. Double Down on UPI & Electronics Bundling

Electronics drives ~50% of revenue and UPI accounts for >51% of checkout volume. Launch zero-cost EMI and instant UPI cashback offers on high-margin accessory add-ons.

📈 Projected AOV Growth: +15-20%

P2: Retention

2. VIP Tier for High-LTV Spenders (>₹10,000)

Over 53% of revenue stems from the top 2 customers. Implement an exclusive loyalty club with dedicated support, early product access, and personalized re-engagement perks.

👑 90%+ Retention on Key Accounts

P3: Margin

3. Implement Strict Discount Guardrails (<20%)

Eliminate unchecked 40-70% discounts on loss-making categories (Machines, Tables, Binders). Cap discounts at 18% unless bundled with profitable high-margin items.

🔒 Turn Net Margin from 0% to +12%

Thank You!
